## FIXED AREA HYDROGEN SAFETY MONITORS

### HY-ALERTA Fixed Area Hydrogen Safety Monitors

The H2scan HY-ALERTA<sup>®</sup> fixed area monitors provide fast hydrogen-specific leak detection and safety monitoring from 0.4% to 5% hydrogen (10% to 125% of hydrogen's lower explosive limit). No cross-sensitivity to other combustible gases prevents false alarms and improves reliability. Capable of operating with or without air/oxygen present. A reliable, consistent hydrogen gas detector for industrial markets. H2scan uses a solid-state non-consumable sensor for direct hydrogen measurement in air or inert gases, with no cross sensitivity to other combustibles.

#### Advantages

- Highly reliable
- Low life cycle cost
- Easy to install and operate
- Minimal maintenance required
- No cross sensitivity to combustible gases
- Not vulnerable to poisoning like other detectors
- Wide hydrogen-specific detection range
- Works in air, oxygen, or inert gas background
- Does not degrade over time
- Non-consumable solid state technology
- Field-configurable settings
- Will not saturate with exposure to hydrogen

#### Applications

**Battery Rooms:** Hydrogen monitoring during lead acid battery charging

**Control Rooms/Analyzer Buildings:** Detection of potentially flammable hydrogen buildup in occupied areas

**Laboratories:** General hydrogen safety monitoring

**Alternative Energy:** Hydrogen refueling station safety monitoring. Fuel cell and electrolyzer leak monitoring

**Hydrogen Cooled Generation and Turbines:** Leak detection during operation

**Industrial Gas Supply and Hydrogen Production:** Leak detection around hydrogen storage facilities and pipes

**Furnaces and Manufacturing:** Area monitoring for unburnt hydrogen

**Other Applications:** General area monitoring wherever there is a risk of hydrogen accumulation
