## End of Life for H2scan GRIDSCAN® 6000

H2scan is committed to continuously improving our transformer monitoring solutions by delivering products that provide greater flexibility, reliability, and value for our customers. As part of this commitment, H2scan is introducing the new GRIDSCAN 6200, the next generation of our multi-parameter transformer monitoring technology.

With the introduction of the GRIDSCAN 6200, the GRIDSCAN 6000 will be discontinued. The GRIDSCAN 6200 will become H2scan's current solution for applications requiring this multi-parameter transformer monitoring capability.

H2scan remains committed to supporting customers with existing GRIDSCAN 6000 installations. We will continue to provide technical assistance and product support for the installed base in accordance with product and component availability.

Customers planning new GRIDSCAN 6000 projects are encouraged to transition to the GRIDSCAN 6200. H2scan representatives are available to assist with product selection, application requirements, and the transition to the new platform.

For additional information regarding the GRIDSCAN 6200 or the transition from the GRIDSCAN 6000, please contact your H2scan representative.
