

HY-SIGHT™

Continuous Visibility for
Battery Safety Systems

Awareness Before Action

Gain Visibility.
Improve Safety.

The HY-SIGHT is a centralized monitoring and visualization platform designed to give facilities a clear, real-time view of their battery safety system. By bringing connected sensor data, system status, and alerts into one intuitive interface, HY-SIGHT helps operators quickly identify developing conditions and take action before they escalate. Designed to work alongside H2scan's battery safety monitoring solutions, HY-SIGHT simplifies system oversight by providing actionable information from a single location. This intelligent platform transforms continuous monitoring data into greater situational awareness, helping facilities strengthen battery safety, improve response times, and maintain confidence across their operations.

- + **Configurable Alarm**
- + **Central Monitoring**
- + **Easy Installation**
- + **User-Friendly**

HY-SIGHT brings connected battery safety data into one centralized view, providing real-time system status, alerts, and sensor insights. Operators can quickly identify developing conditions, track system performance, and take action before potential risks escalate.
